

HVAC Fall Prep

Essential tips for homeowners on maintaining heating systems this autumn

01

Schedule Maintenance

Ensure your furnace is serviced before winter to catch minor issues early.

02

Change Filters

Regularly replace air filters every 30 to 90 days for optimal HVAC performance.

03

Inspect System

Have a professional check your system for safety and efficiency before winter arrives.

04

Clean Outdoor Units

Clear debris from outdoor AC units to prepare them for winter conditions.

05

Stay Comfortable

Follow these steps to ensure your home remains cozy throughout the colder months.
